- **HTML Layout Techniques:**
  - HTML tables
  - CSS float property
  - CSS framework
  - CSS flexbox
- The <table> element was not designed to be a layout tool! The purpose of the <table> element is to display tabular data. So, do not use tables for your page layout! They will bring a mess into your code.
- You can use div, span and HTML5 layout elements along with CSS for pages layout instead of tables.
